To Whom It May Concern:

I am writing this letter of recommendation on behalf of L.K. Machinery Inc. We have been die casting copper alloy parts for over twenty years. We purchased an L.K. QDCC-160 cold chamber die cast machine and have been running it for over a year now. The machine has met or exceeded all of our expectations, the machine is very well built with high quality components and has not had any problems since we put it into production.

The staff at L.K. was very helpful as well. When our machine arrived the technician came to do the start up and made sure we were making parts before he left. He also made sure we understood all the controls, capabilities and maintenance needed on this machine. This machine was part of an entirely new cell and integrating it with all the other equipment was very easy. Their response to any questions I have had since we purchased the machine has been prompt and accurate.

In conclusion I would recommend L.K. both for its equipment and its staff to anyone considering the purchase of a new machine.

Respectfully Yours,

Paul Peterson
